

# EQUIPMENT COVERS

Western Industrial Canvas equipment covers are designed and sized to meet a specific need - inside or outside. Depending on their use they may be made with oiled canvas, vinyl, cordura, sunforger, polaris, heavy-duty canvas, or other specialized fabrics. Some are reinforced with an internal padding or other special materials.

## CARE:

Taking care of your equipment covers will vary depending on the fabric, but you can generally use a medium bristle brush to clean off excess dirt, oil and grease. Mild household cleaners may also be used.

## INSTALLATION:

Our methods for fastening and securely attaching equipment covers varies based on the use.

Whether we use fasteners, grommets, magnets or other hardware, they're designed to attach securely and stay put.

Whenever practical, we also design them to be installed and detached by one person.

## STORAGE:

Western Industrial equipment covers can remain in place, or they can be rolled up and placed in dry storage.
