

# SOUND DAMPENING CURTAINS

Similar to our equipment covers, our custom sound dampening curtains are designed and sized to meet a specific need in a specific space. They are made with oiled canvas, vinyl, cordura, sunforger, polaris, heavy-duty canvas, or other specialized fabrics. All sound dampening curtains are reinforced with an internal padding or other special materials that meet your needs.

## CARE:

Caring for sound dampening curtains will vary depending on the fabric. However, you can generally use a medium bristle brush to clean off excess dirt, dust or other debris. Mild household cleaners may also be used.

## INSTALLATION:

Our method for fastening and securely attaching sound dampening curtains varies based on the use. In many cases, they are designed with grommets which allow for secure attachment to your desired surface.

## STORAGE:

When not in use, our sound dampening curtains can be stored in a dry space.
