

# WELDING CURTAINS

Fire and spark-proof welding curtains are worth their weight in gold to a welder or anyone else who wants to contain sparks or debris in a discreet space. Ours are sturdy and designed to fit your space. Multiple high-temperature fabrics available.

## CARE:

They can remain hanging in your designated space or be detached for travel to another location.

Caring for them is straightforward. Use a medium bristle brush or a heavy-duty rag to clean off excess dirt, oil or anything else your welding curtain withstands.

## INSTALLATION:

We produce custom magnetic welding curtains and grommeted curtains. Both are easy to install and remove. Magnetic welding curtains simply need to be attached to your desired metal surface. Our magnets are powerful, so they will stay put. Our grommeted curtains should be laced to your frame or any other suitable surface.

## STORAGE:

Our welding curtains can remain in place or be rolled up and placed on a dry shelf. They can be stored in a truck as well, just be sure to keep them reasonably dry so they last as long as possible.
