

WINDSHIELD PROTECTORS

Western Industrial Canvas heavy equipment windshield protectors are custom made for your brand and model, and they're built to last. Easy to install and care for, they're designed to stay put, ensuring reliable protection under tough conditions.

Why are Western Industrial Canvas heavy equipment windshield protectors the best? Because we took the time to select and test the best fabrics, fasteners and materials for the job. Our designs have been worked over for a solid custom fit for your backhoe, loader, bulldozer, tractor or any other heavy equipment you own. They can be installed and removed by one person on the road in inclement weather or otherwise -- because that's practical, real-life use.

Equally as important, they save you time, hassle and money. They're also easy to store and care for.

CARE:

To care for your windshield protectors, simply wipe off excess dirt, grease and oil with an absorbent rag. Typical household spray cleaners also work very well for heavy-duty grime.

INSTALLATION:

Place your cover over the windshield allowing our extra-strength magnets to grab the metal. Straps are generally designed to wrap around the cab but can be attached in any practical way that holds the cover tightly in place. Removal is equally as easy - detach the straps, then pull the windshield protector off the machinery.

STORAGE:

Our heavy-duty windshield protectors are designed to withstand moisture and debris. When not in use, store your windshield protectors in a dry place; behind the seats of your equipment or on a shop shelf.
